

Amazon Web Services (AWS) Jump Start

System Source's cloud storage repository protects your organization from data loss.

Step 1 – Initial Consultation:

System Source consultants will visit to understand your business needs and:

- Perform a high-level review of your current backup process
- Discuss your goals for a storage solution including retention
- Understand current and future backup capacity and bandwidth requirements
- Clarify Recovery Time (RTO) and Recovery Point Objectives (RPO)

Step 2 – Written Action Plan:

A written Action Plan prescribing the appropriate AWS service and associated training including these recommendations and deliverables:

- Conceptual diagram of the backup system
- Choose appropriate AWS storage options
- Skills development course for one administrator – AWS Technical Essentials

Step 3 – Setup and Maintain:

Guide your IT administrator through:

- Creating an AWS account and security
- An introduction to the AWS management console
- Setting up a secure connection to AWS
- Provisioning cloud storage
- Testing data transfer to the cloud
- Tracking backup status for higher Disaster Recovery integrity

Fee: \$3000 plus \$100 per server
